<sup>1</sup> Acute gastroenteritis is only notifiable if suspected outbreak or linked to common source or person in high risk category e.g., food worker, caregiver, etc. (check list of high risk category)

<sup>2</sup> Notification must include a faxed copy of serology confirming acute hepatitis and LFTs

<sup>3</sup> Notify on suspicion and send confirmatory serology (IgM) for Measles/Mumps/Rubella or Nasopharyngeal swab result for measles or Pertussis to RPH when available.

<sup>4</sup> Notified by Hospital Practitioner using specialised form

<sup>5</sup> Acute Dengue Fever or Ross fever notifiable by telephone if there is NO recent overseas travel; if there is recent overseas travel, notify by fax.
